DETAILED ACTION

Priority

1. An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification or in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)). The specific reference to any prior nonprovisional application must include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.
2. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in France on 4/20/2001. It is noted, however, that applicant has not filed a certified copy of the 01/05367 application as required by 35 U.S.C. 119(b). See MPEP 1895.01 II.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 16 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Bonningue (US 6,206,245).

Bonningue '245 discloses a pump for a reservoir (6) with a dispenser head (2) axially movable between an upper and lower position and locking elements (14, 15) for retaining the

dispenser head in the lower position. Bonningue '245 also discloses a metering chamber defined by an inlet valve (20) and a piston rod (duct 16) that locks the inlet valve when the head is in the lower position (Figure 1). Bonningue '245 inherently performs the method of claim 17.

5. Claims 16 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Bonningue (US 6,209,761).

Bonningue '761 discloses a pump for a reservoir (6) with a dispenser head (2) axially movable between an upper and lower position and locking elements (14, 15) for retaining the dispenser head in the lower position. Bonningue '761 also discloses a metering chamber defined by an inlet valve (20) and a piston rod (duct 16) that locks the inlet valve when the head is in the lower position (Figure 1). Bonningue '761 inherently performs the method of claim 17.

Allowable Subject Matter
